EURADOS IC2017n Participant Meeting

Outlook and closure of the meeting

Marie-Anne Chevallier, Elena Fantuzzi, Michael Hajek,
Marlies Luszik-Bhadra, Sabine Mayer, Rick Tanner,
David Thomas, Filip Vanhavere

- The organizers and EURADOS would like to thank all participants in IC2017n and in particular those of you who have attended the participant's meeting:
 - Your participation and feedback is much appreciated - it helps us to understand how well neutron personal dosimeters perform in the workplace
 - Your feedback is also much appreciated - it helps us to understand how to structure future intercomparisons
- As with the other intercomparisons run by WG2, the intention is to repeat at regular intervals:
 - This is necessary for the QA of IDS's
 - It is also necessary in some cases to satisfy regulators
- The first priority for the Organizing Group is to summarize the results in papers for peer review and also as a EURADOS Report

- The next neutron personal dosimeter intercomparison is planned as IC2022n
 - This will keep the regular periodicity
 - Allow us to monitor progress in neutron personal dosimetry
- Owing to the vast “experience” of the Organizing Group there are likely to be major changes to the composition of the group
 - I have made myself available to lead the group
 - Other new Organizing Group members will be required
- Your feedback, developments in standards and the results of IC2017n and IC2012n will be reviewed in structuring IC2022n
- Results from the intercomparisons will be fed into the EURADOS Strategic Research Agenda (SRA): M Carasena and R Tanner task on neutron dosimetry
- And again, thank you for your input...
